Wunhill identifies the following requirements:
• Central set of controls for auditing.
As we continue this pilot, we will identify more options.

Wunhill is still working on preparing the organization's compliance needs for live production. Compliance will not be enforced on the pilot.

Phase 2: Prepare

Prepare a high-level design.

Duration: 30 minutes

Design the solution by diagraming a visual concept for this Client Request's required resource.

If you are onsite with a team, you can use a whiteboard.

If you are working remotely, you can access a Word template that is preconfigured with smart shapes, which allows you to insert Microsoft Azure stencils for your design. Click the smart shape and browse to images/pictures/AzurePNGfiles to see the available images.

Create your design based on the requirements derived from the Client Request.

You will be asked to present your diagram before moving on.

Consider the following while you design your solution:

- Based on what you have learned today and your experience with Azure resources, what other organizational and regulatory compliances could impact your design decisions?

Phase 3: Deploy

Configure the solution based on the requirements in the Client Request.

Duration: 15 minutes

Use Azure APIs to efficiently create and configure resources based on your design diagram. When you are finished, ask your Coach to provide feedback on your work.

Review preferred solution.

Reconvene with the entire team to hear your coach share the preferred solution for the Client Request.
